Implement technical controls to protect against common cyber attacks.

Cyber Essentials

What is Cyber Essentials?

Cyber Essentials is a government-backed cyber security certification standard aimed at recognising those organisations that have implemented the controls and procedures required to defend against basic cyber threats and attacks from the Internet. When aligned with the standard, an organisation can help prevent up to 80% of the most common cyber-attacks. Taking the next step towards certification, demonstrates your organisation takes Cyber Security and the protection of company and client data seriously.

How do I become Certified?

An online account will need to be created in the Cyber Essentials Sceme Portal for your organisation to complete the self-assessment questionnaire. Once the questionnaire has been completed it will be reviewed by Secure Business Solutions Limited and, if successful, you will be awarded the Cyber Essentials Certificate. If unsuccessful, you have a further 48hrs in which to resubmit your answers before a final assessment is conducted.

Organisations seeking the highest level of assurance in Cyber Security should consider progressing to Cyber Essentials Plus.

5 Key Technical Controls:

Secure configuration

Firewalls

User access control

Patch Management

Malware protection
