

Cyber Essentials Plus is designed to assess an organisations cyber security controls are able to withstand basic Internet based threat actors with low levels of technical capability. The assessment seeks to ascertain whether individual controls have been implemented correctly by re-creating various attack scenarios to determine whether they can achieve a compromise with widely available capabilities.

## What happens on the day of the visit?

A typical Cyber Essentials Plus Assessment will include the following:

### Initial Meeting:

- Confirm scope
- Check pre-requisite requirements are fulfilled:
- Confirm access granted to documentary evidence required.

### Nessus vulnerability scan of following areas:

- Patch management
- Secure Configuration
- Access Control

### Secure configuration checks in the following areas:

- Secure Configuration
- User Access Control
- Malware Protection (servers; desktop computers; laptop computers; tablets; mobile phones)
- Boundary firewalls; (desktop computers; laptop computers; routers; servers in scope).

### External IP scan of the following areas:

- Email Servers, Web Servers
- Application Servers
- Remote Access Servers

## What Happens Next?

A report will be produced which highlights any risks and necessary actions. This report will be sent to a Cyber Essentials Assessor for checking, before the Cyber Essentials Plus Certificate can be issued. If there are any major failings you will be offered a period of time in which to re-mediate the issues after which time we will reassess the areas of failure (additional costs will be incurred).
